April 10, 2025

### **PPC blue: Greece's most powerful charging Hub in Patras with a total capacity of 1.2 MW**

- *New 360kW ultra-fast charger at the TOP PARKS shopping center in Patras, enabling simultaneous charging of 2 vehicles*
- *Upgraded charging experience with 29 charging points and a total capacity of 1.2 MW*
- *36 PPC blue Hubs across Greece for a more seamless and faster charging experience through the country's largest and fastest-growing network*

PPC blue's public charging network is significantly strengthened with the addition of a new 360kW ultra-fast charger at the PPC blue Hub located in the TOP PARKS shopping center in Patras, home to IKEA. With a total capacity of 1.2 MW, the new PPC blue Hub enables simultaneous charging for up to 29 vehicles. It includes 21 AC charging points up to 22kW, 6 charging points up to 180kW, and 2 ultra-fast charging points up to 360kW (HPDC) for rapid vehicle charging.

The 360kW ultra-fast charger at the TOP PARKS site is currently the fastest and most powerful in Greece, equipped with a touch screen display for real-time charging information, smart lighting, and many more features. A full battery charge can be achieved within approximately 15 minutes, depending on the charger's technical specifications and the vehicle model.

Drivers can conveniently book a charger via the PPC blue app, enhancing the ease and flexibility of the charging process. Through PPC blue app, users can also monitor the status of the battery charging in real time once they have selected their preferred charger.

With the launch of the new PPC blue Hub in Patras, PPC blue now operates more than 36 Hubs nationwide—significantly upgrading the charging experience for drivers across the country's largest public charging network.

### **A new era of high-speed charging**

PPC blue Hubs combine key features that make public charging easier, faster, and more accessible. Each PPC blue Hub location is specially designed to include at least two fast-charging points alongside a minimum of eight AC charging points, offering a total of at least ten points. The broad network of

PPC blue Hubs ensures high-speed charging with minimal waiting times, allowing drivers to take advantage of nearby shopping or entertainment activities while their vehicle charges.

PPC blue was the first e-mobility provider in Greece to introduce charging hubs, playing a leading role in enhancing the charging experience and upgrading the country's charging infrastructure. PPC continues to make e-mobility accessible and affordable for all, through Greece's largest and fastest public charging network—with more than 2,600 charging points and over 350 fast-charging stations nationwide.
